This open ledger database records all transactions across interconnected computers. Initially, Bitcoin appealed mainly to technologists and libertarians as an alternative to government monetary policies.

Today, Bitcoin functions as digital money, an investment asset, and a decentralized transaction system. According to Market.us, the global Bitcoin market, valued at \$27.1 billion in 2024, is projected to reach \$220.3 billion by 2033, with a CAGR of 26.2%. The widespread adoption is evident, with over 100 million active Bitcoin wallets in use, demonstrating its popularity beyond tech enthusiasts.

Its dominance has inspired the creation of many altcoins and fueled further advancements in blockchain technology.
